

VIZCOM 101

Quick training guide

A short introduction to Vizcom for designers. Get to know the program and the range of what it can do, with examples from neckwear, belts, and wallets.

FIG. 01 LEATHER BELTS

STARTING POINT FOR THE EXAMPLES

PRODUCTS

Neckwear, belts, wallets

COVERS

Sketch, render, vary, 3D, animation

PRACTICE

A suggested first 45 minutes

FIG. 02 STRIPED TIE

START HERE

WELCOME TO VIZCOM 101

Vizcom 101 is a short introduction to Vizcom for designers. It covers the essentials of **sketching, rendering, and iterating**. By the end you can set up your account, find your way around, run a full sketch, render, and refine cycle, and use the Workbench to explore variations and motion.

The examples in this guide come from accessories: a striped tie, leather belts and buckles, and wallets.

TRY THIS

Keep the guide open next to Vizcom and take one product, a tie, a belt, or a wallet, from sketch to export.

THE WORKFLOW IN FIVE STEPS

01 Sketch Draw a clean concept in Studio, like a tie blade or a buckle, or upload one.	02 Render Turn the sketch into a realistic image.	03 Vary Explore form, color, and new views, like buckle shapes and belt colorways.	04 Extend Make 3D, animation, and in-context scenes.	05 Export Upscale and download in the right format.

LESSON MAP

All 16 lessons, in order.

STAGE 1 Get set up 01 Creating your account 02 Workspace overview 03 Creative interface

Create an account and find your way around Home, Studio, and Workbench.

STAGE 1 / GET SET UP

FIG. 03 STUDIO, ONE BELT ON THE CANVAS

WORKSPACE 1

STUDIO Your drawing desk

- A focused space for drawing and rendering.
- Pick a layout from the Vizcom logo in the Home panel: **Default**, **Classic** (most sketching room), or **Stacked** (Create and Layers side by side).
- In the refreshed Studio, every AI tool (Render, Modify, 3D) lives in one right-side panel.
- Designs generate in the background and land in a Results panel, so you can keep working.

FIG. 04 WORKBENCH, BELT AND BUCKLE EXPLORATIONS

WORKSPACE 2

WORKBENCH Your idea wall

- An infinite, shared whiteboard for exploring many concepts at once.
- Pan with **spacebar + drag**. Zoom with trackpad, Ctrl + scroll, or the corner controls.
- Click Create near an image, choose Render or Refine, and generate. Click again for more variations.
- Teammates work live with you. Click their initials (top right) to follow their view.
- **Switching:** from Workbench to Studio, double-click the canvas or press Edit.

FROM SKETCH TO RENDER

One belt buckle, from technical drawing to render.

01 DRAWING VIEWS

02 DIMENSIONS

03 RENDER

04 SECOND RENDER

Render

- Creates a new image from your sketch.
- Use it for your first concepts and new directions, like a new buckle profile.

Refine

- Adds detail and material quality, and keeps your colors, shapes, and proportions.
- Works best from a color-blocked sketch, such as a buckle with its finish blocked in.

Drawing Influence

- Controls how strictly Vizcom follows your lines.
- Higher stays close to your sketch. Lower gives the AI more freedom.

ORDER OF WORK

Render for new directions. Refine once you have a direction you like. Adjust Drawing Influence as you go.

WRITING A GOOD PROMPT

FOLLOW THIS ORDER, AND SKIP THE STEPS YOU DO NOT NEED

01	Subject	umbrella and pouch set
02	Details and materials	optional, the image shows them
03	Setting	white background
04	Style	photo studio quality, even lighting
05	Brand feel	optional

- Lead with what matters most. The first words carry the most weight.
- Separate ideas with commas.
- Adjust emphasis with weights like (*even studio lighting:1.2*). Stay between 0.5 and 1.5.
- Short prompts often work as well as long ones.
- Change one detail at a time, like a print or a background, to compare directions.

EXAMPLE PROMPT

create a photo studio quality photo of this umbrella and pouch set with even studio lighting on white background

FIG. 05B UMBRELLA AND POUCH SET STAR PRINT

EXPLORE VARIATIONS

Once you like a render, do not start over. Use the **Variate** tools to branch out.

FORM VARIATION What other shapes could this buckle be?

A SIMPLE, RECTANGULAR

B ORNATE, CURVED

- Add a **Variate** block in Workbench, or open the Variation panel in Studio.
- Pick a preset or write your own axis labels, like chunky vs. delicate.
- Drag the point on the grid, set a count, and press Generate.
- Near the center is subtle. Farther out is bolder.

COLOR VARIATION What other colorways work for this belt?

SAND

BROWN

GREY

BLACK

- Start from a render or sketch and choose **Color** in the Variate block.
- Extract a palette from any image, edit it, use saved asset colors, or pick a preset.
- Choose how many variations, then generate. No re-rendering needed.
- Handy for CMF exploration and client options.

BEYOND THE FLAT IMAGE

Two lessons in the Extend stage.

LESSON 10

New views

Generate different perspectives of the same design, such as front, side, three-quarter, and end views. Here, one pouch shown four ways.

LESSON 12

In context rendering

Place a design in a real setting. Here a belt is added to model photos to see how it looks when worn.

3D AND ANIMATION

Turn a finished render into a model or a short video.

2D TO 3D From a finished render to a model

CLEAR SILHOUETTE AND SHADING

SEVERAL VIEWS OF THE OBJECT

- Start with a finished render, like the buckle, and click the **Generate 3D** icon.
- Choose **Standard** (faster) or **Detailed** (smoother, sharper mesh).
- A clear silhouette and shading gives a more accurate model.
- Export as GLB, OBJ, STL, USDZ, or FBX.

ANIMATION From a still to a short video

FIG. 06 LEVI'S STANDARD

- Add an **Animate** block and attach one or more frames.
- Pick a motion: Turntable, Zoom, Pan, or Tilt.
- Add an optional prompt, choose **Standard** or **Turbo**, and press Animate.
- One frame is enough. Results loop by default.
- Try it on an in-context shot, like a belt on a model, to see it move.

EXPORT AND UPSCALE

Get the file out at the right size and format.

IMAGES	PNG, JPEG, SVG (vector, Pro)
VIDEO	MP4, GIF, like the animation on page 9
3D MODELS	GLB, OBJ, STL, USDZ, FBX
SIZES	Original, 2K, 4K, 8K

- Open the Export panel from the toolbar or right-click menu.
- Use Original size for screens and save upscaling for print, like a line sheet.
- Export PSD layers when a teammate needs to edit.
- Several files download together as a ZIP.

TRY THIS

Export the same pouch set render twice, once at Original size and once upscaled, and compare the zipper and stitching.

FIG. 07 UMBRELLA AND POUCH SET

SAMPLE RENDER

BEST PRACTICES

Small habits that save a lot of re-rendering.

01

Prepare your sketch

- **Keep it clean.** Use high-contrast lines, one product per canvas, and no messy backgrounds.
- **Go big.** Larger sketches give more detail. Use Move (M) so a slim tie or belt fills the frame.
- **Test it by eye.** If it would be hard to render cleanly by hand, it will be hard for Vizcom too.

○

02

Steer the result

- **Blend with a brand look.** Build clear volume first, add the brand's visual language in the prompt, then lower Drawing Influence step by step.
- **Balance structure and freedom** with Drawing Influence.
- **Polish last.** Use Modify on specific regions, like a stitch line or a buckle finish, once the main render is right.

○

03

Common fixes

- **Render looks messy:** clean up lines, remove clutter, scale the sketch up.
- **AI drifts from your design:** raise Drawing Influence or switch to Refine.
- **Too literal:** lower Drawing Influence and add a stronger style word.
- **Odd or distorted:** bring prompt weights back toward 1.0.

RULE OF THUMB

One product per canvas, drawn big and clean. Change one thing at a time.

YOUR FIRST 45 MINUTES

A suggested first session to get comfortable with Vizcom.

01 Set up Create your account and open a new file. Try all three Studio layouts. LESSONS 1 TO 3	02 Sketch Draw one simple product you know well, like a wallet, belt, or tie. Keep lines clean. LESSON 4	03 Render Render twice, once with high Drawing Influence and once low. Compare. LESSON 5	04 Vary Move your best render to Workbench. Try Form variation, then Color variation. LESSONS 6 TO 9	05 Extend Make a 3D model or a turntable animation of your favorite. LESSONS 10, 11, 13	06 Export Export a PNG at Original size and an upscaled version. Note the difference. LESSON 16
